The Ultimate Guide To Text Message Marketing Part II: How to use Text Marketing .Q: Adding an instance of a class to another class without an interface? I have a web page and I am making a data retrieval process from a database. The web page is meant to display the retrieved data on a listbox. This is so I can load in data from a database into an array. When I declare the array, I want it to have an instance of the Item class. However, I am uncertain as to how to declare an instance of a class without making use of an interface. Item myItem = new Item(itemID); A: If you want the item to be a member of the class that's loading it, then you don't have to do that. You'll just need to reference the class and cast that to a specific object type (eg Item). For example: Item myItem = (Item)myClass.GetItem("whatever"); This will not require a reference to an interface. However if you must have access to an interface, you can do this (this example is for a generic list): Item[] items
