Loading do” and “we don’t do that.” As a result, let’s not get too accustomed to the “black and white” that defines all of us as progressives. As if to allay any concerns that I am suggesting that we compare the actions of the Nazis to those who have been fighting ISIL, I’d like to point out that in one of the book chapters in which I explore the role of the media, I reference the OSS-funded Radio Free Europe as well as Radio Liberty, which are not Nazi-linked. But the point here is that it is necessary to examine the history of the policies that have been used to delegitimize these movements in order to both hold them accountable and also to offer a clear defense of the current movement. In this essay, I will do exactly that, and I will attempt to limit the arguments that are allowed to be made in order to clarify our understanding of these issues. ISIL and the Law: What is the Debate About? The first group of points I’d like to address are the claims that ISIL is not new. It’s not a wahhabi, or even a “motivated by Islam” organization, because the religion of Islam does not allow for such a thing. And the idea that this group was born in Syria is also wrong. In fact, the group has existed for almost a decade in Iraq and Syria. The statements made by ISIL on the Iranian website Fars News in March of this year also confirm this, stating that “ISIL is the product of the Muslim countries of the region.” This is a perfectly rational and objective way to view a group that has existed in these countries for a decade and a half, which explains their ability to reconstitute themselves despite being destroyed and their limited presence in other countries. The “Syria is to blame” line of argument, by contrast, is incorrect because this argument holds that it is the fault of Bashar al-Assad, and that Syria is the nation that spawned the group. The truth, of course, is that ISIL is not Syrian or an outgrowth of Syrian politics. It is a group that was formed, bred, trained, and regrouped by ISIS, the precursor to ISIL, in

The cost of developing new drugs and technologies is too high, forcing the pharmaceutical industry to rely on off-patent drugs as the backbone of its portfolio. In 2013, the US federal government spent more than \$240 billion in health care, and only about a third of it was spent on the two classes of new drugs that are commonly referred to as “blockbusters.” According to a 2015 report by PricewaterhouseCoopers (PwC), about 60 percent of the revenue growth in the pharmaceutical industry from 2014 to 2020 will come from generics and biosimilars. Generics are drugs that have never been approved by the Food and Drug Administration for the US market but that have been approved by a major non-US regulatory agency such as the European Medicines Agency. “On average, the cost of a generic drug is 10 to 20 percent lower than that of the branded drug,” the report said. The most expensive drug currently being developed is Pfizer’s new cholesterol-lowering drug Crestor, with a price tag of \$800,000 per patient. In the realm of human health, there are not many successful drugs available beyond the launch of blockbuster drugs such as insulin and human growth hormone. As a solution to the problem of drugs that do not have a patent, the pharmaceutical industry has turned to the idea of “me-too” drugs, which are generic copies of more successful medicines. This is not the answer, however, for the more complex, expensive problems in precision medicine that hold the key to human longevity
