on top of saving your guests, you can save your game at any time. you will know you have saved because you can exit out of the game. you can also continue playing after a save file at any time as long as you have saved your entire game. this is very helpful if you have developed an idea for a new mountain and you want to save that idea for another time. the lessons learned and the things i enjoy most about this game are: 1) your money does not come out of thin air, 2) managing costs is a major part of the game and is sometimes easier said than done, 3) it is fun. as far as overall game feel goes, the game is not completely lacking in content. it may be lacking in certain areas, but the developers were not only aware of this but took steps to compensate for such lack of content. for example, some of the tasks are much easier and less time consuming than they should be. this is largely due to the ease with which you can place the assets into place and tweak the landscape. the amount of time and effort it would have taken to make your own terrain elevations and mountain ranges instead of using placeholder models is seemingly not worth the effort compared to the overall game experience. i actually find that some of the best things about the game are the easiness with which you can build. one of my most enjoyable projects was creating my condo complex in the middle of a valley surrounded by trees. another was creating a small ski resort in the middle of a forest on top of a hill. another factor that has to be taken into account is what features you simply cannot have in the game due to the limitations of the isometric graphics. for example, in a real-life ski resort, every single guest would have at least one tow rope to avoid plummeting to their inevitable demise. the game does not allow you to add such a feature. as far as i know, you can build only one "cable-to-cable" lift. and this is one of the most basic and basic types of lift. that said, ski resort tycoon does allow you to construct multiple lifts and tunnels to connect them. however, if you do not build a tunnel, or it does not connect to the other lifts or tunnels in some way, the lift will not be able to run. similarly, the mountain slopes are made up of multiple sections, each of which can be traversed by a single lift. however, there's only one mountain in the game. i had fun running my lifts to various parts of the mountain and watching them dump people at the bottom of the mountain.
